Requirements Engineering

ABOUT US

We are your trusted partner and Expert in digitalization, agile software development and in all process phases in the technical realm.

With over 50 years of experience, EPS stands as one of the largest independent software developers in Eastern Switzerland.

REQUIREMENTS ENGINEERING AND UX DESIGN:
MORE THAN JUST RECORDING REQUIREMENTS

Requirement engineering extends beyond noting and fulfilling requirements; it involves a strategic transformation of existing ideas into a project's overarching vision. This vision outlines high-level goals, setting the stage for neutral, initial requirements and potential solutions. Our dedicated team will guide and assist you throughout this process.

DEVELOPING REQUIREMENTS
What do I want to achieve with my product?

REQUIREMENTS ENGINEERING
IN THE AGILE WORKING WORLD
### Everything must be agile

We offer you extremely competent support in all aspects of requirements engineering. Our well-trained employees, with their many years of versatile experience, can offer you concrete advice. Together, we work out what is to be achieved with the product and from this, the solution-neutral and rough requirements are determined. With these findings, possible solutions are then discussed and at the end you decide how the project will be realised.

Agile methods prevent customers from receiving outdated products at project's end. They adapt to evolving requirements, ensuring a customer-focused approach. Using approaches like Scrum, projects define a minimum viable product (MVP) at the start. Requirements are gathered and implemented in iterative sprints, allowing for continuous updates based on customer needs. Agile methods enable flexibility for better paths, improving outcomes beyond initial plans.
